Axle Group Weigher with Diade

This vehicle weighing system from National Weighing & Instruments is excellent for a variety of different applications. By using a diade to control the weighing of your axle groups, your truck can be weighed automatically using our Chain of Responsibility software and Stop/Go lights on a miniature weighbridge. The system can be pre-programmed to your applications. You can take a measurement over shorter or longer periods of time, depending on your requirements. The diade axle group weigher will help you to ensure your trucks are not overloaded before leaving your site. You can ensure traceability of measurement as each weighing transaction can be recorded in a SQL format, which can be made available at a desktop computer in your office.

Features Include;

- Quick, simple operation
- High visibility red/ green lights to control the weighing process and tell the driver when to move forward to the next axle group.
- Swipe card identification system or manual detail entry
- Printer
- USB connection to easily download data
- Configurations available for external driver operated systems, or internal weighbridge hut installations.
- Connects to Existing Bridges
