

Winweigh IV

The world's most powerful weighbridge software

National
Weighing & Instruments

Outstanding pedigree

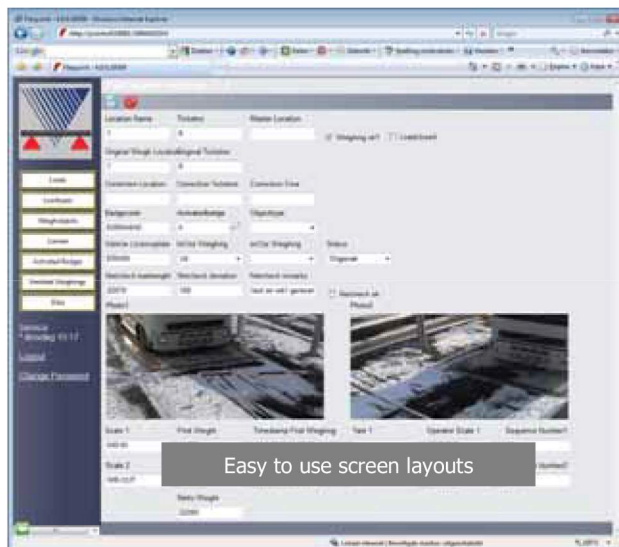

Winweigh IV is the world's most powerful and versatile weighbridge and vehicle management software.

It has been developed to provide virtually limitless flexibility for truly future proof weighbridge management systems.

With capabilities to interface directly with leading management systems including **SAP, J D Edwards, Navision and Sage**, WinweighIV brings the ultimate in control. Whether you operate a single weighbridge or have multi site installations, Winweigh provides the optimum solution.

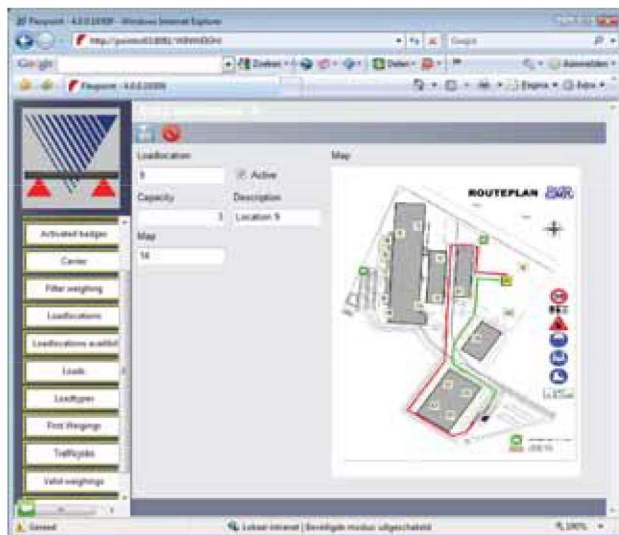

Winweigh's power is optimised when used in conjunction with our revolutionary PC based Diade 2050 driver operated terminal. This unrivalled combination brings the latest in industrial interactive touch control together with leading edge programmability.

Total vehicle management capability

Not only is Winweigh capable of managing your weighbridge operation and data collection, but it can also be used as a comprehensive vehicle management system, reducing on site bottlenecks and improving site security

Winweigh IV can be used to control security cameras and automatic number plate cameras, providing digital records of each and every vehicle entering and leaving sites. In conjunction with this it can control entry/access barriers and interface with our Safeweigh radiation detection system.

To find out how WinweighIV can revolutionise your weighbridge application,
